Award one mark for stating and one mark for explanation	(each point 2 Marks)
BUNGAUARUNA REPARENTER PARENT CONTOUR CONTOUR RUNAR REPART	Total: 20 Marks

Model answers

(a) The qualities or attributes of management accounting information is explained as below:

- Relevance: The information must be relevant for the purpose for which the manager wants to use it.
- Accuracy: The information should be sufficiently accurate for the intended purpose. Incorrect information could have serious and damaging consequences.
- Timing: The information must be produced in time for it to be used effectively. Information which is not available until after decision is made will be useful only on comparison and long-term control, and may serve no purpose even then.
- Understandability: The information must be capable of being understood by the recipient. The information must be clear to the user.
- Volume/Details: The amount of details in a statement or report will depend on the recipient level in the organization. Reports to the management must therefore be clear and concise.
- Completeness: An information user should have all the information he needs to do his job properly.
- Communication: Within any organization, individuals are given the authority to do certain tasks, and they must be given the information they need to do them. Budget must be provided to the managers so as to assist him in controlling the expenditures in his office.
- Channel of communication: There are occasions when using one particular method of communication will be better than others. The channel of communication might be the company's in-house journal, a national or local newspaper, a professional magazine, a job Centre or school careers office.
- Cost: Information should have some value, otherwise it would not be worth the cost of collecting and filing it. The benefits obtained from the information must also exceed the costs of acquiring it, and whenever management is trying to decide whether or not to produce information for a particular purpose a cost/benefit analysis ought to be made.

(b) The non-manufacturing costs incurred in an organization

• Administrative costs: Is the sum of costs associated with the overall management of the enterprise which cannot be readily identified with one of the major functional areas e.g. salary of the factory manager would be seen as a production cost but the salary of the personnel officer will be viewed as administrative cost since the personnel function does work for all other functions of the enterprise.

• Selling Costs: Is the sum of costs associated with the securing of orders from customers? Included in this area will be items such as the salaries paid to the salesmen and expenditure on advertising.

• **Distribution costs**: Is the sum of costs associated with warehousing the products and their delivery to customer? The cost of wooden pallets on which products are stacked for delivery to customers and the cost of delivery whether using the company's own vehicles or outside

haulage firm are examples of distribution costs.

• **Finance Costs**: These are costs incurred to secure funds to finance the organization's activities. These include interests on loans and overdrafts, dividends to shareholders, interests on debentures.

• **Research and development Costs**: These are costs that are incurred to invent new products or to modify the existing ones, as well as costs incurred to acquire more information on such products.

(c) maintaining the highest levels of integrity

- Avoid actual or apparent conflicts of interest and advise all appropriate parties of any potential conflict.
- Refrain from engaging in any activity that would prejudice their ability to carry out their duties ethically.
- Refuse any gift, favour, or hospitality that would influence or would appear to influence their actions.
- Refrain from either actively or passively subverting the attainment of the organization's legitimate and ethical objectives.
- Recognize and communicate professional limitations or other constraints that would preclude responsible judgment or successful performance of an activity
- Communicate unfavorable as well as favorable information and professional judgments or opinions
- Refrain from engaging in or supporting any activity that would discredit the profession

QUESTION TWO

Marking guide	Marks
a) Fixed, flexible budget and actual income statement	
calculation of sales value (0.5 for each; fixed, flexed, actual income statement)	1.5
Determination of material cost (0.5 for each; fixed, flexed, actual income statement)1.5
Determination of labour cost (0.5 for each; fixed, flexed, actual income statement)	1.5
Computation of variable overheads (0.5 for each; fixed, flexed, actual income statement)	e1.5
Contribution (0.5 for each; fixed, flexed, actual income statement)	1.5
Fixed overheads (flexed budget 0.5; actual income statement 0.5)	JA2202
Net profit (0.5 for each; fixed, flexed, actual income statement)	1.5
Maximum	12

b) Negative impacts of a budgetary control system in organizational performance

Each correct and well explained point, award 2 Marks	
Suspicion of being manipulated by the budget system	2
Competition between cost centres	2
A discouraging atmosphere	BR2
concentrate on the short term	50 2
uncontrollable costs	2
conflict	2
waste within the business	02
Maximum	8
Total 200 pB 200	20

Model answers

(a) Fixed budget, flexible budget and actual income statement

Details	Fixed budget	Flexed budget	Actual
ATER BURDE ARTERICALO ATENDA	FRW	FRW	FRW
Sales	105,600,000	85,800,000	86,580,000
Less variable cost	2024 BRUPEBREEBRUCPAL	PLANOPAR 2UARTE AL	2ALE BARFED ARTER OF
Direct material	(57,600,000)	(46,800,000)	(44,265,000)
Direct labour	(16,800,000)	(13,650,000)	(12,994,400)
Variable overheads	(7,200,000)	<u>(5,850,000)</u>	(5,050,800)
Contribution	24,000,000	19,500,000	24,269,800
Less	2FEBRU PALACCO2ALBERNART	UABRUAR BEEPARFOR	ALEFE 20241202481202
Fixed overheads	(10,200,000)	(10,200,0000	(9,503,200)
Net profit	<u>13,800,000</u>	<u>9,300,000</u>	<u>14,766,600</u>
1202 ABBR BEBBLEEL BROOKALOON	AREUAR RUAT BRUIAR AREPA	RUCPAREDO2AL201AL	202 BRUPEBREEBRU

Workings

Fixed Budget

Sales = selling price * units 4400*24000 =105,600,000 Direct material 2400*24000 =57,600,000 Direct labour 700*24000 =16,800,000 Variable overheads 300*24000 =7,200,000

Flexed budget

Flexing index=actual units/budgeted units =19500/24000 =0.8125 Alternatively, just use this formula to arrive at flexed budget

Cost per unit for each cost element × actual units of output. Note: Flex all variables in the fixed budget Fixed overheads are not flexed.

(b) The negative of a budgetary control system in organizational performance.

- Suspicion of being manipulated by the budget system: it is seen as a pressure device.
- Competition between cost centers may arise and thus diminish the unifying effect of budgetary control.
- A discouraging atmosphere will be created by failure to commend favorable results, and by criticism of adverse results.
- Standard costing and budgetary control systems concentrate on the short term. It must be recognized that managers may therefore be placed in a situation whereby they make decisions that satisfy the short-term control systems but damage the future position of the business. For example, a manager may decide to reduce his research and development costs in order to stay within budget. This may satisfy the short-term objectives but will clearly have long-term implications for the business.
- Standard costing and budgetary systems sometimes include in operating statements a number of costs over which the manager has no control. This approach can be counterproductive and demotivating as a manager cannot be held responsible for costs that he cannot control.
- Unless constant vigilance is maintained it will be possible for managers to incur expenditure but have it charged to another manager's cost centre. This practice can result in conflict within the business which can cause a great deal of harm.
- Managers may feel that they have fully to spend their budgets so as to justify their original predictions and in so doing avoid having their following year's budget reduced. This approach may cause waste within the business

QUESTION THREE

Marking guide	Mark(s)
a) Make or buy decision	
Cost per unit and advice	BEE 024102408
(award 0.5 mark for correct computation of specific fixed cost (0.5 $*$ 4=2)	
(1mark for each correct value for cost per unit (manufacturing) (1*4=4)	
(1 mark for each correct economical decision; 1*2=2)	
Maximum	8
b) Relevant cost-Material A	
Current price	2120 ARY 202 EBR
Revised price	EBRAUICE 41CI
Relevant cost	Y20 ARY RUAR 24
MATERIAL B	
Net realizable value	SFEBER202 RY2 2
SKILLED LABOUR	
Actual cost	PARTOPARH202
Opportunity cost	V200 BBRUEBLE2
Relevant cost	24 2024 CP 2
Maximum	RUAR REPERTION
Total	20

Model answers

a) i. Make or buy decision

Particulars	WEE	EXE	YEE	ZEE
Material cost	80	100	40	80
Labour cost	160	180	80	120
Variable overhead	40	60	20	40
Specific fixed cost	60	25	R. 15 P	50
Cost per unit	340	365	155	290
Outsourcing	240	420	200	280

Advice

For products WEE and ZEE, the company should outsource because it is economical to purchase than manufacture them locally. And for products EXE and YEE the company should manufacture internally because it is cheaper.

ii. other factors to consider

Variable production cost: It is a necessary cost because it relates to the total cost of making the product. Fixed costs are not relevant costs.

Opportunity cost: it relates to the potential benefits that are foregone by choosing one alternative i.e either make in-house or outsource.

Attributable specific fixed cost: Only additional fixed costs that are specific to the product to be manufactured should be considered. General fixed costs are not relevant costs.

b) Relevant cost

Material A

The material is ordinarily used in the organization and therefore its relevant cost is the current price of the material.

Cost last month =FRW 1862,000/ 19,000 kg = FRW 98

Revised cost (+4%) = FRW $98 \times 1.04 = FRW101.92$

Relevant cost of Material A = $30,000 \text{ kg} \times \text{FRW}101.92 \text{ per kg} = \text{FRW}3,057,600$

Material B

The material is not required for normal production; therefore, the relevant cost of this material will be the net realizable value if it were sold. (opportunity cost)

Relevant $cost = 2000 \text{ kg} \times FRW1100 \text{ per kg} = 2,200,000$

Skilled labour

The relevant cost will be the actual cost and the opportunity cost. This is due to the fact that the skilled labour is in short supply. By engaging the skilled labour, product C will not be produced.

Details	CPAR REP 1202	FRW
Cost of skilled labour (8000 hours ×950)	24 10 RUAUALE	7,600.000
Opportunity cost	AREARENCPAREEL	202 202 842024
Skilled labour cost per unit of Product C	3800	UATBROUAKCRARIO
Cost per skilled labour hour	950	ALREE 2024202 812
Number of hours required per unit of Product C (3800/950)	AUT 24 204	RUARUARBRUNAR
Contribution per unit of Product C	4000	REE PARKEEP.0241
Contribution per skilled labour hour (4000/4)	1000	241 CPUARUARU
Opportunity cost of skilled labour (8000*1000)	AP120 ARY20 ARTY	8,000,000
Total	EBRREEBBRUID	15,600,000

Total relevant costs of this contract will therefore be

Details	FRW
Material A	3,057,600
Material B	2,200,000
Labour	15,600,000
Total	20,857,600

QUESTION FOUR

Marking guide	Marks	
a) (i) Break-even point in sales		
Sales		0.5
Direct material		0.5
Direct labour		0.5
Direct overheads		0.5
Selling and distribution		0.5
Total variable cost		0.5
Contribution		RV202BRUIEBLERE
Contribution ratio		CPARE CPALATCIPAR
Break-even sales		2420ARY2026BROFF
Maximum mark s		BRUARARIOPAAL6
ii) Margin of safety		
Formula		BRUREBRUAKARHU
Calculation		PARPER 202410 202 APY
Maximum Marks		BRUAR RUAREBRUA2
iii) To make a profit of 24m		
Formula for Target sales		22 FEBRERFER PARKER

Calculation		202 EBRUA

Solution to labour shortage		
Recruit and train additional personnel		BRUNCPAUL
Overtime		120 120 A 21
Outsourcing		UM BROWN
Second shift		PAREN2022
Discontinuing a product		RUALUABRU
Maximum Marks		REPARARE 5
Any other valid limitation		
CVP analysis limitations		
Time consuming		ARRY REED
Applicable to a single product		2010PAICPOL
Lacks accuracy and precision		REVURP 24
Limited significance of cost data		FEBLEYNOP

Maximum Marks						5
Total Marks						20

Model answers

a) Break even sales Contribution

Sales	150,000,000*97%	145,500,000
Less Variable cost	024 204 RT2 CPARUABER FEB BRU PAROPA	AUCPARY20ARYRUARY20
Direct material	32,500,000*97%	31,525,000
Direct labour	27,000,000*100 %	27,000,000
Variable Overhead	35,000,000*97%	33,950,000
Selling and Distribution cost	13,000,000*96%	12,480,000
Total Variable cost	A MOP MERIO AR BRUTAR REFERENCE AND FEDERAL	104,955,000
Contribution	105 BEEFE ART 15 BEACT 24 02 4 04 BEACT	40,545,000
Contribution ratio	40,545,000/145,500,000	0.28

Break even sales = Fixed cost/ contribution ratio

= (10,000,000+10,500,000)/ 0.28 = FRW 73,214,286

- (ii) Margin of safety = Actual sales break even sales = 145,500,000 73,214,286= 72,285,714
- (iii) To get target profit of 24 million
- (iv) To get target sales = (target profit +Fixed cost)/ contribution ratio = (24,000,000+20,500,000)/0.28=158,928,571.40

b) Ways of solving labour shortages

- i) Recruit and train additional personnel.
- **ii**) Resort to employing existing labour on an overtime basis. During the overtime periods, a premium would be paid which would have to be more than offset by the additional contribution. Also to be considered is whether fixed costs and variable overhead will change as a result of the extended use of personnel and facilities. In addition, the effect of the overtime on labour efficiency should be considered.
- **iii)** The production might be contracted out to another manufacturer. In this case the main factor would be the external contract price which would have to be included in the contribution analysis.
- iv) Install a second shift.
- v) Addition/Discontinuance of Products
- c) Limitation of CVP analysis
- The CVP analysis is time consuming
- The analysis is only applicable to a single product
- Where there is difficult in classifying costs between variable and fixed, it is difficult to apply it
- At all levels of output, it assumes that sales price remains constant
- At all levels of output, it assumes that unit variable cost is constant
- At all levels of output, it assumes that fixed cost is constant which is not practicable in thelong run
- Inventory is not taken into consideration
- It is not useful for production planning

QUESTION FIVE Marking guide

(a) standard cost card	UARUAR BRUUAR ART 2
Marginal costing	
Correct sales figure	OFEBREEBRURE FEBRUAR
Correct valuation of production cost and closing stock	HOPALOP AKEY 20 RY L

Profit as per absorption	RATORNA TOTARE 20 AR 20 AR	5,500,000

Note:

The closing inventory in the case marginal costing was under casted, therefore, the difference between the two valuation methods should be added to the profit as per marginal Where the reconciliation statement is prepared starting with the profit as per absorption, the difference should be deducted.

(b) The key differences between marginal and absorption costing are discussed below:

- **Purpose** marginal costing enables well informed short-term decision making, and absorption costing calculates the cost of output as well as providing the closing inventory valuation for inclusion in the financial statements.
- **Calculation** marginal costing is based on variable costs but excludes fixed costs and absorption costing includes both direct and indirect cost. Generally, if a cost is variable it is also direct, therefore, the addition of fixed overheads to the marginal cost will give the full absorption cost.
- **Profitability** when there is closing inventory there will be a difference in the profits calculated by the two methods. The difference in profit will be explained by the difference in the value of the closing inventory.
- Use marginal costing is not allowed for financial reporting purposes whereas absorption costing can be used for both financial and management accounting.

QUESTION SIX

Marking Guide

CUMBRENER CONTRACT AND REPAIR OF AN CONTRACT OF A CONTRACT OF	Marks
a) Explanation of approaches to budgeting and functional budgets	RUAR RY20FEBARE
i) Identification of limiting factors	EBR AICHAUIDAIL

Model Answers

(a)

(i) Determine whether raw materials or labour or both raw materials and labour are limiting factors

Limiting factor exists when the resources needed are more than the resources available.

Raw Materials

Raw materials available	241CT PAR REED	4,000	kgs	SPU CPACPALO	CON RUARUA
Raw materials needed =	202 UTC UAUM	EBRUARAB	ARAICP RARY	\mathbf{C}_{2}	PEREBERE PEREBE
Units	300	420	25	0 200	ALCPOPAKARY
Kgs per unit	02418120214201	BRUEEBER6	RECOMPTION 2.	5 20 12 12 5	Y REEBREEDARD
Total kgs needed	1,200	2,520	62	5 1,000	2 41CP1241CP1
Raw materials needed =	1,200 + 2,	520 + 625	5 + 1,000 =	= 5,345	kgs

Raw materials needed are 5,345 kgs while available are 4,000 kg therefore raw materials are a limiting factor.

Labour

Labour hours available	241 CPARY 20 AR UP	2,000	hours		EBREEB
Labour hours needed =	A	ALC PAR BA	ALC' ARY RUACE	202 R.F. D	CPARAF
Units Conserver Bruch	300	420	250	200	ALUAR
Hours per unit	R 202 BR 2 2	EBR OF LA	202 PT 1.5	BRUNN 2	PARTOR
Total hours	600	420	375	400	1202241
Total labour hours needed =	= 600 + 420	+375 + 4	00 = 00	1,795	hours

Labour is not a limiting factor because the hours needed (1,795) are less than the hours available (2,000) Only raw material is a limiting factor and not labour.

(ii) Calculate contribution per unit of limiting factor

1202 AUCUAL BRUEBRUNCH BRUCENA OFBBLOOM RUEBRUNG	A A A	RUPER ABOA	12022AVC	RUDBRD
Selling price per unit (Frw)	6,000	8,280	4,800	5,400
Less: Variable cost per unit (Frw)	4,050	3,800	2,920	3,650
Contribution per unit (Frw)	1,950	4,480	1,880	1,750
÷ Raw material kgs per unit (kgs)	Rev 42	6	2.5	0241015
Contribution per unit of Limiting factor (Frw)	488	747	752	350

(iii) Find the optimal production plan and total contribution

Conclusion

The optimal production plan is to make 420 units of B, 250 units od C and 213 units of A to give total contribution of FRW 2,766,950.

(b) Explain five factors to be considered before outsourcing

- 1) Quality: The quality of products or services the business is outsourcing to must be of the standard acceptable. There must be an assurance that the right quality of products or services will be provided
- 2) The management will also need to assured of continuity of supply of goods and services. There must be a guarantee that supply of what will be needed will not stop before the contract signed is expired.
- 3) There must me an agreement of a fixed price at which the products or services will be exchanged. If prices are to change, it must be clear under what conditions and the limits.
- 4) The management should investigate whether the available capacity freed up can be used to generate additional profits from a different product.
- 5) Management should consider whether labour morale will be adversely affected by a decision to outsource

Cost implication - purchasing when compared to local manufacture which one is cost effective

Model Answers

(a) Explain five scope of management accounting fields or systems

Scope of management accounting is very vast and includes various aspects of the business activities. Management accounting has its scope in the following fields or systems:

1. Financial accounting

It is the foremost and indispensable part of accounting. In this system, business transactions of financial character are recorded in the proper subsidiary book. Posting of these transactions is done in ledger and from this the final accounts are prepared. Final accounts include profit and loss account and balance sheet. Profit and loss account represents the profit/loss earned during the accounting period and the balance sheet represents the financial position of a company as on a particular date. Financial accounting is the foundation from management accounting as it provides the necessary information for preparation of details and reports to be presented to the management.

2. Cost Accounting

Cost accounting is one of the important branches of accounting. It ascertains the cost of producing a particular commodity and rendering of services cost of selling and distribution. It facilitates effective planning regarding commodities, proper decision-making and cost control. Some of the important tools of cost accounting are marginal costing, standard costing and budgetary control.

3. Revaluation accounting

Revaluation accounting ensures that capital is represented at its real value in the accounts and the profit has been calculated keeping this fact in mind. In other words, it assures that the assets are revalued according to the need and its effect has been brought into the accounts. Management accounting helps to ascertain the revalued figures of the assets.

4. Control accounting

Controlling means to measure the variation, if any, between actual and the standard results and taking corrective measures to remove that variation. Management accounting is the indispensable part of control accounting, budgetary control, inventory control, equality control are some of the important techniques of management accounting for control accounting.

5. Statistical methods

Management accounting is concerned with presentation of accounting information in the most impressive and understandable manner. It makes use of graphs, charts, index numbers, pictorial presentation and other statistical methods in order to make the information more intelligible. For scientific analysis of financial statement and accounting information various statistical techniques such as mean, standard deviation, covariance, correlation, t-test, etc and used in management accounting.

6. Interim reporting

Interim reporting means preparation of reports on monthly, quarterly and half-yearly basis. These reports include income statement, cash flow statement, funds flow statement, scrap reports etc.

7. Internal audit

Internal audit means audit of various departments by the internal members of the organization. The techniques of management accounting can be used to judge the efficiency and economy of the organization. Ratio analysis and funds flow analysis are widely used to judge the efficiency of an organization.

8. Taxation

Tax planning and its management is an essential function of the management. It includes computation of income as per tax laws, filing of returns and payment of tax within stipulated time.

(b) Calculate the price that IFH will charge for of job number 6101 and 6102 inform of a statement. Clearly show the prime cost, marginal cost, absorption cost, total cost and job price for each job.
